

P.C.H. Hollman

Flavonoid research

Wageningen University & Research, NL

<https://openalex.org/A5021449136>

Profile

Here is a concise academic profile for P.C.H. Hollman:

P.C.H. Hollman is a prominent researcher affiliated with Wageningen University & Research, Netherlands. His expertise lies in the field of flavonoid research, where he has made significant contributions through his extensive publication record. With 83 papers to his name, Hollman’s work has garnered substantial attention, amassing 22,739 citations.

Hollman’s academic influence is evident in his network metrics, which demonstrate exceptional standing within his field. His PageRank percentile of 100.0% indicates that he is a highly influential author, while his betweenness percentile and citation in-degree percentile also confirm his prominent position among researchers. Furthermore, his extensive collaboration with 142 co-authors underscores his ability to work effectively with others.

Hollman’s research focuses primarily on flavonols (32 papers), flavan-3-ols (18 papers), isoflavones (5 papers), flavones (3 papers), and flavanones (1 paper). His sample publications showcase his interest in the health effects of dietary flavonoids, including their potential anticarcinogenic properties and bioavailability. These studies demonstrate Hollman’s commitment to advancing our understanding of flavonoid research and its implications for human health.

Network Metrics and Field Ranks

Metric	Value	Percentile [†]
Papers	83	100.0 %
Citations	22739	100.0 %
PageRank	0.00158	100.0 %
Betweenness centrality	0.00276	100.0 %
In-degree (cited by)	19814.0	100.0 %
Out-degree (cites others)	2078.0	99.8 %
Co-authors	142	—
First-author papers	25	—
Last-author papers	14	—

[†] Proportion of authors in the Flavonoid research corpus scoring below this author. Betweenness is approximated for top-ranked authors only.

Research Breakdown

Research areas (subclass)

Subclass	Papers
Flavonol	32
Flavan-3-ol	18
Isoflavone	5
Flavone	3
Flavanone	1
Anthocyanin	1

Study types

Study type	Papers
Other	60
Observational	10
RCT	8
Review	5

Sample Papers

- Dietary antioxidant flavonoids and risk of coronary heart disease: the Zutphen Elderly Study
- Polyphenols and disease risk in epidemiologic studies
- Content of potentially anticarcinogenic flavonoids of 28 vegetables and 9 fruits commonly consumed in the Netherlands
- Intake of potentially anticarcinogenic flavonoids and their determinants in adults in the Netherlands
- Dietary Flavonoids: Intake, Health Effects and Bioavailability
- Content of potentially anticarcinogenic flavonoids of tea infusions, wines, and fruit juices
- Relative bioavailability of the antioxidant flavonoid quercetin from various foods in man
- The sugar moiety is a major determinant of the absorption of dietary flavonoid glycosides in man
- Flavonols, flavones and flavanols - nature, occurrence and dietary burden
- Chlorogenic Acid, Quercetin-3-Rutinoside and Black Tea Phenols Are Extensively Metabolized in Humans
- Catechin Contents of Foods Commonly Consumed in The Netherlands. 1. Fruits, Vegetables, Staple Foods, and Processed Foods
- Evidence for health benefits of plant phenols: local or systemic effects?
- Flavonoids and Heart Health: Proceedings of the ILSI North America Flavonoids Workshop, May 31–June 1, 2005, Washington, DC1, , ,
- Catechin intake might explain the inverse relation between tea consumption and ischemic heart disease: the Zutphen Elderly Study
- Absorption, Bioavailability, and Metabolism of Flavonoids

Networks

Left: Co-author ego network. Edge width $\propto$ shared papers. **Right:** Citation ego network. **Green** = authors this author cites; **Purple** = authors who cite this author. **★** = focal author.

Data source: [OpenAlex](#). Metrics are computed within the Flavonoid research corpus and reflect within-field standing only. Generated May 31, 2026.
