Impact Commentary

The paper "Dietary antioxidant flavonoids and risk of coronary heart disease: the Zutphen Elderly Study" published in The Lancet in 1993 represents a landmark observational study within the field of Flavonoid research. This work investigated the relationship between dietary intake of flavonoids and the risk of coronary heart disease among elderly men, providing valuable insights into the potential health benefits of flavonoid consumption.

The impact of this paper is evident in its extensive citation record within the Flavonoid research corpus, with 1545 papers citing it. Notably, several prominent studies have built upon or referenced this work, including Structure-antioxidant activity relationships of flavonoids and phenoli (1996), The Effects of Plant Flavonoids on Mammalian Cells: Implications for In (2000), and Polyphenols: Chemistry, Dietary Sources, Metabolism, and Nutritional S (2009). These papers collectively demonstrate the significant influence of this study in shaping the understanding of flavonoid bioactivity and its potential applications in human health.
